PSE&G Children’s Specialized Hospital
Pediatric Inpatient Rehabilitation Programs and Therapies
“For children with complex healthcare needs, our hospital is the best place for care in the country. Each child and family are surrounded with a team of experts 24 hours a day, 365 days a year.”

CHRISTOPHER HAINES, DO, CHIEF MEDICAL OFFICER
Why is Inpatient Rehabilitation Critical for Recovery?

The choice for inpatient rehabilitation is best made as soon as possible at the acute care hospital or soon after a referral from your physician. There is a finite window of time after a traumatic injury, illness, or other life-changing condition, where therapy is much more effective and results are stronger.

The benefits of inpatient rehabilitation are:

- Regaining maximum functional ability to enhance social, emotional, and community integration
- Individualized nursing and medical care during a fragile and necessary time
- Necessary emotional support and encouragement for your child and family

During an inpatient stay, your child will benefit from a multidisciplinary team approach including:

- 24-hour medical and nursing care
- Physical therapy
- Speech therapy
- Occupational therapy
- Psychology services
- Educational resources
- Recreational therapy
- Child life service
- Participation in a variety of leisure programs

Supported by unsurpassed outcomes and unparalleled patient feedback, our hospital specializes in providing a broad range of complex medical and rehabilitative care, with a comprehensive approach that is unmatched. Ongoing research pursuits ensure Children’s Specialized Hospital remains at the forefront of treatment methods and patient outcomes.

Unsurpassed Outcomes

- 99% of patient parents would recommend our inpatient program to others. (Source: 2013 Press Ganey independent survey)
- Our inpatient rehabilitation program is significantly better than the national average in:
  - Faster recovery rates
  - Improved abilities upon discharge
  - Better recovery results
  - Higher independence upon discharge  
  (Source: 2012 and/or 2013 Uniform Data System for Medical Rehabilitation WeeFIM)
- Children’s Specialized Hospital quality scores were almost double the national averages in the 2014 The Leapfrog Group independent hospital rating survey:

Patient Feedback

“Everyone is so compassionate, patient and knowledgeable. They are always willing to go the extra mile for the families and have given me a sense of hope that I was looking for with my children.”
Jessica Krill, Beachwood, NJ

“Children’s Specialized has helped me overcome one of the most difficult obstacles I have ever faced.”
Patient, PSE&G Children’s Specialized Hospital

“Cooper wouldn’t be here today running and jumping if it weren’t for the amazing work being done at the hospital every day.”
Jennifer Weil, Morristown
PSE&G Children’s Specialized Hospital is conveniently located in New Brunswick, New Jersey, and is easily accessible for in-state and out-of-state patients. Our 68 bed unit is a part of the state’s only pediatric health campus comprised of PSE&G Children’s Specialized Hospital, Bristol-Myers Squibb Children’s Hospital at Robert Wood Johnson University Hospital, and the Child Health Institute of New Jersey. Only in New Brunswick do children and families have access to acute care, rehabilitation, and research on one campus, enabling children to move seamlessly through their recovery.

- Major Highway
At Children’s Specialized Hospital our holistic approach ensures each patient regardless of diagnosis, receives care that treats the entire child. As leaders in patient-and-family centered care, we employ parents of current or former patients. Our Family Faculty members understand that a partnership with our families is essential. As employees of the hospital, they are available to provide support and guidance during your stay.

Based on feedback from parents and families, each patient’s room is a semi-private setting to ensure patients have the ability to interact with their peers and socialize during their stay.

Each patient’s room includes:

- Flat-screen TV
- Game system
- Family sleeping accommodations
- GetWellNetwork® an interactive communication tool

Take a virtual tour of a patient room at [www.childrens-specialized.org/virtualroomtour](http://www.childrens-specialized.org/virtualroomtour)

In addition to rooms and amenities, we have therapy and family oriented rooms to make your stay comfortable.

- Game rooms
- Playrooms
- Dining spaces
- Classroom
- Therapy areas
- Kitchens
- Laundry rooms
- Family showers and bathrooms
- Recreation room
- Family lounge
- Aqua Therapy Pool
- Outdoor Therapy Garden
- Playground
- Café
- Family Resource Centers
- Computer rooms
- Meditation room
- Remote Patient Care Technology

Welcome to Children’s Specialized Hospital

Children’s Specialized Hospital is the leading pediatric rehabilitation hospital in the country, treating children from birth to 21 years affected by conditions such as: traumatic brain injury, brain tumors, stroke, spinal cord dysfunction, complications of premature birth, autism, developmental delays, mental health issues, and other life-changing injuries or illnesses.

Our Mission

The mission of Children’s Specialized Hospital is to be the preeminent provider of specialized healthcare services for infants, children, and young adults.

Our hospital is dedicated to improving the lives of patients through delivering superior medical services, in a safe and caring environment. Through a blend of innovative therapies, personalized attention, and compassionate support, our award winning doctors and skilled pediatric therapists strive to make a difference for children and their families each and every day.
The Brain Injury Program treats conditions such as:

- Traumatic brain injuries
- Cerebral vascular accidents (CVA)
- Brain tumor
- Hypoxia
- Anoxia
- Toxic injury
- Infection (encephalitis, meningitis)
- Late effects of cancer treatment
- Degenerative diseases
- Epilepsy
- Other brain dysfunctions

Our **Specialized Care**

When a child suffers a brain injury, the path to recovery is often a challenging one. The Brain Injury Program at Children’s Specialized Hospital provides young patients a broad range of complex medical care and rehabilitation therapy to recover from their injuries.

We treat individuals who have acquired a brain injury through physical trauma (TBI, concussion) or medical condition that affects brain function.

Our **Individualized Approach**

Upon admission to our Brain Injury Program, our team of specialists carefully evaluates and assesses the child’s neurological status, function level, nursing and medical needs as well as his or her motor function, speech, hearing and intellectual abilities. The team develops a customized rehabilitation program that focuses on the child’s medical, physical, cognitive, and psychosocial needs. A typical evaluation includes an assessment in the following areas:

<table>
<thead>
<tr>
<th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>General intellectual function-basic academic skills</td>
</tr>
<tr>
<td>Attention/working memory</td>
</tr>
<tr>
<td>Visual spatial processing</td>
</tr>
<tr>
<td>Language skills</td>
</tr>
<tr>
<td>Motor skills</td>
</tr>
<tr>
<td>Executive functions (planning, initiation, organization, mental flexibility)</td>
</tr>
<tr>
<td>Social-emotional functioning</td>
</tr>
</tbody>
</table>
A combination of individual and group therapies, psychostimulants, and gait training technology such as the ZeroG® system, are implemented daily depending on the unique needs of each patient. As a part of the Brain Injury Program, each child is equipped with the tools and technologies to help him or her with seating and positioning, independent mobility, communication, daily activities, and computer access. During the child’s stay, one-on-one tutoring or lessons in our inpatient classroom are provided by our certified teachers to help patients adapt and prepare to re-enter the classroom environment. The Brain Injury team is able to assist the family with home modifications and ready school staff for a return to the classroom upon discharge.

Through neurorehabilitation outpatient services at Children’s Specialized Hospital, our experts are able to help our patients for five to 10 years post-trauma. In addition, we will arrange for vocational services and driver assessment and training, as necessary.

**Our Team**

The Spinal Cord Rehabilitation Program is under the direction of Dr. Michele Fantasia, MD, who is board certified in Spinal Cord Injury Medicine and Pediatric Physical Medicine and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- 100% of patient parents would recommend our inpatient brain injury program to others. (Source: 2013 Press Ganey independent survey)

- Our inpatient traumatic brain dysfunction program is significantly better than the national average in:
  - Faster recovery rates
  - Better recovery results
  - Higher ability level upon discharge
  - More independence upon discharge
  (Source: 2012 and/or 2013 Uniform Data System for Medical Rehabilitation WeeFIM)

Our Specialized Care

The comprehensive Burn and Wound Care Rehabilitation Program at Children’s Specialized Hospital treats children and adolescents ages birth to 21, suffering from complex burns and wounds. Through the combination of holistic therapies and expert medical care, the burn and wound care program at Children’s Specialized Hospital ensures comprehensive rehabilitation and the best quality care. As a part of the rehabilitation process, scar control remains a top priority while encouraging the most autonomy and functionality possible.

Our Individualized Approach

Treatment in the comprehensive Burn and Wound Care Program includes wound surveillance, along with assessment of skin grafts and pressure mapping of wounds for effective scar management. The individualized approach to burn and wound care can include:

- Daily medical management by physician and clinical team
- Physical therapy
- Occupational therapy
- Speech therapy
- Recreational therapy
- Fabrication of splinting equipment as needed
- Specialized compression garments with splinting
- Debridement
- Whirlpool treatment to aid in scar tissue healing
- Advanced dressings, including specialized gel padding

Our clinical teams are highly skilled in the rehabilitation of:

- Conditions resulting from antibiotic resistant bacterial infections
- Traumatic wounds with loss of cutaneous integument – represented by skin disruption and loss of subcutaneous tissues, loss of muscle, and bone
- Pressure sores
- Non-healing surgical wounds relating to diabetes, poor nutrition, compromised immunity or infection
Through intensive therapies and innovative methods of continuous care, the Burn and Wound Care Program ensures each child and family is in constant communication and collaboration with multiple interdisciplinary teams. The plan of care for each patient is unique, but can include:

<table>
<thead>
<tr>
<th>Stretching activities to improve functional abilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gradual exposure to outdoors and heat to accommodate compromised systems</td>
</tr>
</tbody>
</table>

Nursing staff present on referring acute care burn unit to increase comfort level and allow for a comprehensive transition.

Arranging follow-up visits upon discharge to referring physician and burn unit to continue monitoring during the healing process.

Education for parents regarding the necessity of pressure garments to lessen extreme scarring and increase range of motion.

**Our Team**

The Burn and Wound Care Program is under the direction Dr. Michele Fantasia, MD who is board certified in Pediatrics, Physical Medicine, and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP, a talented team of pediatric specialists, therapists, and consulting physicians. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Admissions Information:**

For more information, please contact:

The Admissions Department at Children’s Specialized Hospital

908-301-5461 or admissions@childrens-specialized.org
Our **Specialized Care**

The Chronic Illness Management Program at Children’s Specialized Hospital is a comprehensive inpatient program for adolescents ages 13-21, who struggle to manage their condition. It provides the teen and family with a structured, comprehensive treatment plan to address medical, nutritional, psychological, and family communication issues.

Since parents and caregivers have a crucial role in supporting their child’s health, we encourage parent/caregiver participation in medical education, nutritional and psychological counseling sessions to ensure the greatest success.

Our **Individualized Approach**

The Chronic Illness Management Program is typically a four week program that follows a transdisciplinary model and behavioral approach to care, that addresses the physical, emotional, and psycho-social needs of each patient. The goal for each adolescent is always to improve self-management of the disease. The behavioral approach includes:

- Direct instruction to develop new skills/knowledge
- Shaping of appropriate behavior
- Reinforcement of positive behaviors
- Fading of cues and prompts
- Generalization of skills across activities and settings
- Use of visual tools
- Medication education
- Structured nutritional counseling
- Supportive psychological counseling

The Chronic Illness Management Program is especially for adolescents with conditions such as:

- Diabetes
- Post-organ transplant
- Chronic respiratory disease
- Other chronic medical illnesses considered on an individual basis
The treatment environment includes:

- Intensive and varied daily exercise
- Shopping/cooking experiences to promote good nutrition
- Multiple daily therapies/activities
- Outings to promote community integration
- Family education and counseling
- Psychological testing, as indicated, to identify learning issues

Continuous glucose monitoring is available for diabetes patients, in combination with focus on gaining metabolic control. Together, this represents a powerful vehicle for making effective and informed changes in each individual’s diabetes care.

At the conclusion of an inpatient stay, our expectation is that each patient is significantly more independent at managing his or her medical condition. A principal goal of the program is to ensure a healthy transition back into the community. This means we help patients work with their outpatient medical treatment team, school, and community-based agencies to ensure success once they return home.

**Our Team**

The Chronic Illness Management Program is under the direction of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services. Dr. McDonald is supported by a talented team of staff pediatric specialists, therapists, and consulting physicians. All medical programs are under the supervision of Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- 100% of patient parents would recommend our inpatient chronic illness program to others. (Source: 2013 Press Ganey independent survey)

- Our inpatient chronic illness program generates clinically and statistically significant improvement for:
  - Metabolic control of Type 1 Diabetes, reduction in Hemoglobin A1c
  - Reduction in Type 1 Diabetes related hospitalizations after discharge
  - Patient reported quality of life
  - Diabetes knowledge
  - Diabetes self-efficacy

The Admissions Department at Children’s Specialized Hospital

908-301-5461 or admissions@childrens-specialized.org
Our Specialized Care

The Chronic Pain Program at Children’s Specialized Hospital promotes the wellness of adolescents and young adults ages 11-21 years old, with chronic pain by teaching strategies to manage pain and encourage functional activity.

The inpatient Chronic Pain Management Program at Children’s Specialized Hospital is typically for children and adolescents with chronic pain who continue to have significant pain and difficulties with daily function despite a period of consistent outpatient therapies.

Our Individualized Approach

This evidence-based program is typically over a four week period, with focus on regaining function and using one’s body in a normal way. The approach to treatment of chronic pain at Children’s Specialized Hospital includes intense physical and occupational therapy and integrated mental health intervention. Treatment may include:

- Physical therapy
- Occupational therapy
- Aquatic therapy
- Psychology
- Recreational therapy
- Child life therapy
- Parent education and support

During the program, the child and family also participate in family psychoeducation support sessions to provide a better understanding of chronic pain and strategies for families to use to support the functionality of the patient.
The focus of the therapies in the Chronic Pain Management Program are to manage pain through:

- Increasing endurance and strength
- Patient/family education about effective coping strategies
- Use of the affected parts of the body
- Desensitization to reduce allodynia (pain from stimuli that typically does not cause pain, such as light touch or temperature change)

Additionally, recreation events for the patient and family encourage community re-integration, encourage appropriate peer interaction and social activities as well as assist in transition to home/community life. School tutoring is also provided on-site as needed. Our goal is for each child to return home to all normal activities, including school and extracurricular involvements, without any physical modifications.

**Our Team**

The Chronic Pain Management Program is under the direction of Dr. Katherine Bentley, MD who is board certified in Pediatrics, Physical Medicine and Rehabilitation with subspecialty certification in Pediatric Physical Medicine and Rehabilitation. Dr. Bentley is supported by a talented team of staff pediatric specialists, therapists, and consulting physicians. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- Patients in our chronic pain program experienced statistically significant outcomes in:
  - Decrease of patient pain level
    (Average score of 7.6 out of 10 at admission to 3.6 at discharge)
  - Improvement of lower extremity functional activity
    (Average score of 35 out of 80 at admission to 77 out of 80 at discharge)
  - Decrease in child report of functional disability
    (Average score of 30 at admission to 9 at discharge)
  - Decrease in parent report of child functional disability
    (Average score of 29 at admission to 7 at discharge)
  - Improved school attendance
  - Decreased need for and use of pain medication
  - Decreased need for assistive device (wheelchair, walker, or cane)

Children’s Specialized Hospital

908-301-5461 or admissions@childrens-specialized.org
Our Specialized Care

The Infant Toddler Program at Children’s Specialized Hospital provides intensive and comprehensive rehabilitation services for infants and young children ages birth to two years with complex medical needs. The program treats children who require all levels of pediatric care, including those who are medically fragile and technology dependent.

When an infant or toddler is admitted, our team of specialists complete a full evaluation and together, with the family, develop a customized rehabilitation program and plan of care. Our multidisciplinary staff is highly trained in working with children who require special medical care. Children with ventilators, tracheotomies, special feeding needs, and intravenous/central lines, can be managed while receiving rehabilitation therapy. Diagnostics and special services available for patients are ventilator assistance and weaning program, rehabilitation technology, orthotics and prosthetics.

Our Individualized Approach

Our highly acclaimed therapeutic program is at the forefront of innovation when providing care for our young patients. The Infant Toddler Program has pioneered the use of rehabilitation therapies to best treat each child’s individual needs including:

- Aquatic Therapy
- Infant Massage
- Occupational Therapy
- Physical Therapy
- Speech Therapy

As a part of the Infant Toddler Program, we treat the following conditions:

- Chronic lung disease or airway anomalies (ventilator dependent)
- Dysphagia or difficulty swallowing
- Chromosomal or genetic disorders
- Short Bowel Syndrome
- Total Parenteral Nutrition (TPN)
- Small bowel, heart, and other organ transplant medication management
- Cyanotic Cardiac Disease
- Pulmonary Hypertension
- Hypoxic Ischemic Encephalopathy (HIE)
- Retinopathy Of Prematurity (ROP)
- Other medically complex conditions
Supported with 24-hour comprehensive medical and nursing care, our team of specialists continuously creates a nurturing and calming setting that orients infants and toddlers to their sensory adaption and integration within their environment. Children’s Specialized Hospital is at the forefront of technological innovations and clinical strategies such as:

- Computer-mediated learning and assistive technologies to increase the cognitive-motor development of medically compromised infants
- Transition of ventilator or technology dependent children to portable ventilation allowing them to transition home
- One of the first hospitals to offer on-site Retinal Scanning technology
- Neuromuscular Electrical Stimulation to promote improved secretion

Upon discharge, we offer support groups, workshops and training programs to educate families and prepare them to help manage their child’s unique needs. We also guide the family through their preparation for home. Families are thoroughly educated about future needs, which may include a home evaluation to determine how best to accommodate ventilators, oxygen, or other medical equipment.

Throughout our continuum of care, Children’s Specialized Hospital remains focused on the ultimate goal: a successful return to home and the community.

**Our Team**

The Infant Toddler Program is under the direction of Dr. Sharon A. Burke, MD, who received specialized training in Neonatology. She is supported by Arti Shah, APN, along with an expert rehabilitation team and medical subspecialists in areas such as neurology, ophthalmology, orthopedics, physiatry, psychiatry, radiology, and urology. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- 100% of patient parents would recommend our Infant Toddler program to others
- A higher percentage of our infants wean off ventilators compared to other similar facilities
Our **Specialized Care**

The highly specialized Multi-Complicated Trauma Program at Children’s Specialized Hospital provides advanced critical rehabilitation care for children and adolescents from birth to 21 years, who have experienced major or multi-complicated trauma. The range of injuries sustained often include severe trauma to multiple organ systems, resulting in the need for comprehensive rehabilitation.

Our **Individualized Approach**

Patients admitted to the program following major and/or multi-complicated traumas, are offered an individualized rehabilitation program by an interdisciplinary team including experts in orthopedics, physical medicine and rehabilitation, pediatrics, neurology, psychiatry/psychology, and other medical specialties. Additionally, during an inpatient stay, patients follow a plan of care specifically tailored to their needs. Each day, patients work with expert therapists specializing in the treatment of complicated trauma rehabilitation. Our clinical teams are highly skilled in the rehabilitation of patients in need of:

<table>
<thead>
<tr>
<th>Treatment Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ventilator management and weaning</td>
</tr>
<tr>
<td>Tracheostomy care</td>
</tr>
<tr>
<td>Gastrostomy feedings</td>
</tr>
<tr>
<td>Total parenteral nutrition</td>
</tr>
<tr>
<td>Prolonged intravenous antibiotic administration</td>
</tr>
<tr>
<td>Catheter management</td>
</tr>
<tr>
<td>Wound care</td>
</tr>
</tbody>
</table>
Upon discharge, patients are guided by expert clinical staff of Children’s Specialized Hospital and referring acute care facilities on continuing the plan of care. Communication between medical staff and family is ongoing to monitor patient progress. If needed, education is provided for caregivers to ensure a seamless transition home.

**Our Team**

The Spinal Cord Rehabilitation Program is under the direction of Dr. Michele Fantasia, MD, who is board certified in Spinal Cord Injury Medicine and Pediatric Physical Medicine and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- Our inpatient multi-complicated trauma program is significantly better than the national average in:
  - Faster recovery rates
  - Improved abilities upon discharge
  - Independence upon discharge

admissions@childrens-specialized.org
Our Specialized Care

Our Neonatal Abstinence Syndrome Program is specially designed to help children overcome the serious health effects of infants who have been exposed prenatally to drugs in utero and go through a withdrawal process after they are born. Upon admission, infants at risk for Neonatal Abstinence Syndrome are carefully monitored by highly skilled clinicians for signs consistent with withdrawal and development. Based on the results of ongoing assessments, each young patient is cared for based on their individual needs.

Our Individualized Approach

During the inpatient stay in the Neonatal Abstinence Syndrome Program, our team provides innovative programming and expert care to achieve the greatest outcomes. In order to ensure our smallest patients are able to develop and grow, Children’s Specialized Hospital creates a nurturing environment by implementing positive sensory inputs such as:

- Swaddling
- Therapeutic touch and handling
- Bathing
- Vestibular sensations such as rocking
- Medication management (including tapering and discontinuation of medication)
- Evaluation for Sudden Infant Death Syndrome (SIDS) with a three channel pneumogram
- Monitoring weight gain, growth charts, and nutrition

The Neonatal Abstinence Syndrome Program treats newborns with health effects as a result of exposure to various drugs. These health effects can include:

- Failure to thrive
- Irritability from withdrawal symptoms
- Gastrointestinal symptoms
- Inability to sleep
Our Team

The Neonatal Abstinence Syndrome Program is under the direction of Dr. Sharon A. Burke, MD, who received specialized training in Neonatology. She is supported by Arti Shah, APN, and a highly trained interdisciplinary team that is comprised of pediatric medical, physical, speech, and occupational therapy specialists, respiratory therapists, recreational and child life therapists, dieticians, patient care coordinators, and volunteer cuddlers. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

Our Outcomes

- 100% of infants in neonatal abstinence syndrome program were weaned off medications.
- 100% of infants in neonatal abstinence syndrome program achieved appropriate weight gain.
- 100% of infants in neonatal abstinence syndrome program achieved normal apnea study.
- 100% caregiver confidence

Admissions Information:
For more information, please contact:
The Admissions Department at Children’s Specialized Hospital
908-301-5461 or admissions@childrens-specialized.org
Our Specialized Care

The Neuromuscular and Genetic Disorders Program at Children’s Specialized Hospital is a multidisciplinary rehabilitation program designed to treat children ages birth to 21 years with complex needs and conditions. Our highly specialized program provides individualized care for children who are ventilator dependent or walk with assistive devices.

Our Individualized Approach

Upon admission into the Neuromuscular and Genetic Disorders Program, patients are provided a comprehensive team evaluation, diagnostic assessment and a personalized rehabilitation plan that can include:

- Aquatic therapy
- Physical therapy
- Occupational therapy
- Recreational and Child Life therapy
- Speech therapy
- Psychology
- Functional electronic stimulation with cycle ergometry

Throughout the child’s stay in the Neuromuscular and Genetic Disorders Program, continuous assessments and goals are created to provide each patient with the tools to improve their mobility, functionality, independence in self-care, and utilization of assistive devices and adaptive technology. Each patient works to reach personal goals and development milestones.

Our comprehensive inpatient program treats conditions such as:

- Guillain Barre Syndrome
- Various neuropathies
- Myopathies
- Muscular Dystrophy
- Complex genetic disorders
- Spinal muscular atrophy
- Diseases of neuromuscular junction
The multidisciplinary approach to therapy allows patients to progress in ways such as:

<table>
<thead>
<tr>
<th>Walking as appropriate without assistive devices</th>
</tr>
</thead>
<tbody>
<tr>
<td>Improving general functions</td>
</tr>
<tr>
<td>Utilize muscular power and cognitive skills to advance self-care skills and mobility</td>
</tr>
<tr>
<td>Increase potential of feeding by mouth</td>
</tr>
<tr>
<td>Utilize adaptive technology and assistive mobility to increase individual potential</td>
</tr>
</tbody>
</table>

The highly specialized inpatient program provides comprehensive follow-up that can include referrals to proper medical specialists and outpatient therapy.

**Our Team**

The Spinal Cord Rehabilitation Program is under the direction of Dr. Michele Fantasia, MD, who is board certified in Spinal Cord Injury Medicine and Pediatric Physical Medicine and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- Our program is more successful helping children recover from neuromuscular and genetic disorders than similar facilities nationwide. (Source: 2013 Uniform Data System for Medical Rehabilitation WeeFIM)
- Our Neuromuscular and Genetic Disorder Program is significantly better than the national average in:
  - Faster recovery rates
  - Better recovery results
  - Improved abilities upon discharge
  - More independence upon discharge
  (Source: 2013 Uniform Data System for Medical Rehabilitation WeeFIM)

**Admissions Information:**

For more information, please contact:
The Admissions Department at Children’s Specialized Hospital
908-301-5461 or admissions@childrens-specialized.org
Our Specialized Care

The Post-Surgical Orthopedics Program at Children’s Specialized Hospital is designed to provide intensive coordinated care tailored to the needs of children from birth to 21 years upon discharge from surgery. Our program is designed to ensure children and adolescents can transition from operative care to intensive post-operative rehabilitation based on their individual needs.

Our Individualized Approach

Immediately following postsurgical procedures, or upon clearance from attending surgeon; the patient, family, and interdisciplinary team develop attainable goals for rehabilitation. Many times, rehabilitation is an extension of prior surgical care or complementary to the ongoing care of a referring surgical specialist. As a part of the Post-Surgical Orthopedics Program, treatment modalities can include:

- Partial weight bearing treadmill training
- Orthotic evaluations
- Various assistive devices including, walkers, crutches and wheelchairs
- Functional electric stimulation with cycle ergometry
- Various forms of exercise equipment
- Facilitation and handling techniques

Upon discharge, education for parents is available to continue progress in the home environment. The ultimate goal is to prepare the patient to return home to all normal school and community activities.
Our Team

The Spinal Cord Rehabilitation Program is under the direction of Dr. Michele Fantasia, MD, who is board certified in Spinal Cord Injury Medicine and Pediatric Physical Medicine and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

Our Outcomes

- Our orthopedic rehabilitation patients had significantly more successful recoveries than the average outcomes of similar national facilities.
  (Source: 2013 Uniform Data System for Medical Rehabilitation WeeFIM)
- Our inpatient orthopedic program is significantly better than the national average in:
  - Faster recovery rates
  - Better recovery results
  - Improved abilities upon discharge
  - Higher independence upon discharge

Our **Specialized Care**

The Spinal Cord Rehabilitation Program at Children’s Specialized Hospital provides intensive and comprehensive rehabilitation services for infants, children, and adolescents with acquired, traumatic, and congenital spinal cord dysfunction.

The program treats patients with all levels of pediatric spinal cord dysfunction, including patients who are ventilator dependent, those who need medical support, special equipment, and special feeding needs – like intravenous and central lines.

Our **Individualized Approach**

Upon admission into our Spinal Cord Rehabilitation Program, the specialty physician and the rehabilitation team complete a comprehensive evaluation. Our team of specialists plans a treatment program and meets regularly throughout the child’s stay to monitor progress and set goals. To maximize the rehabilitation potential for each patient, our hospital utilizes state-of-the-art equipment. Treatments include:

- Assistive technology
- Functional electric stimulation with cycle ergometry
- Body weight supported treadmill training
- Virtual reality
- ZeroG® gait training system

The Spinal Cord Program treats children with conditions such as:

- Traumatic spinal cord injuries
- Cervical level injuries, with ventilator management and weaning (tetraplegia/quadriplegia)
- Spinal tumors
- Lower-level spinal cord injuries (paraplegia)
- Spina bifida
- Transverse myelitis
- Nerve damage
- Spinal cord stroke
- Spinal Stenosis
- Scoliosis
- Guilliane Barre Syndrome
Discharge planning begins as soon as the patient is admitted to the Spinal Cord Rehabilitation Program. At that time, the patient and his or her family are thoroughly educated about future needs. As discharge approaches, the patient can make a functional trial visit to his or her home. This ensures a smooth transition for the entire family upon discharge. Additional services for returning to school and community activities are also available. The program provides comprehensive follow-up, from referring the patient to proper medical specialists to ensuring continuity of care.

**Our Team**

The Spinal Cord Rehabilitation Program is under the direction Dr. Michele Fantasia, MD who is board certified in Pediatrics, Physical Medicine and Rehabilitation with subspecialty certification in Spinal Cord Injury Medicine and Pediatric Physical Medicine and Rehabilitation. Dr. Fantasia is supported by Pushpa Abraham, CNP, and a talented team of staff pediatric specialists, as well as consulting physicians. All medical programs are under the supervision of Matthew B. McDonald III, MD, Section Chief of Special Needs Pediatrics/Inpatient Services and Christopher J. Haines, DO, MBA, FAAP, FACEP, Chief Medical Officer.

**Our Outcomes**

- 100% of patient parents would recommend our inpatient spinal cord program to others (Source: 2013 Press Ganey independent survey)

- Our patients with spinal cord injuries had significantly more successful recoveries than the average outcomes of similar national facilities. (Source: 2013 Uniform Data System for Medical Rehabilitation WeeFIM)

- Our inpatient spinal cord rehabilitation program is significantly better than the national average in:
  - Faster recovery rates
  - Better recovery results
  - Higher ability level upon discharge
  - More independence upon discharge
